Message ID: 4319 Entry time: Thu Aug 7 10:11:02 2008

Run:	1382
Author:	TP
Type:	Info
System:	General
Subject:	MCP2 high-field results

Results of a first series of high-field runs on MCP2, 15kV transport:

- L3=9.5 kV, RA ~ 0.
- TD 85 degree/34 mm (instead of 85/29)
- Mirror 294.8 degree/17.0 mm (instead of 294.8/17.5)
- t0 shifts by about 86 TDC channels to shorter times:
3333 instead of 3419 for 15kV settings.

RA settings, beam spot parameter (fraction in 20x20 mm² with TOF cut), L3=9.5kV (t0 =3333):

Run	Field (A/G)	RA-L	RA-T	RA-R	RA-B	in 20x20 mm ²	x0 (mm)	y0 (mm)
1366	17.4/100	0.00	0.00	0.25	0.00	0.479	-0.08	-0.37
1382	88.0/500	0	0	0.20	0	0.551	-0.43	+0.27
1381	132/750	0	0	0	0	0.663	-0.26	+0.08
1380	175/1000	0	0	0	0	0.790	-0.95	+0.18
1379	263/1500	0.50	0	0	0.50	0.970	+0.43	+0.09
1378	350/2000	0.80	0	0	0.80	0.744	-0.13	-0.38

Results of a 2nd series of high-field runs on MCP2, 15kV transport, with "default" Trigger/Mirror positions:

- L3=9.75 kV, RA ~ 0.
- TD 85 degree/29 mm.
- Mirror 294.8 degree/17.5 mm.
- t0 shifts by a 68 TDC channels to shorter times:
3351 instead of 3419 for 15kV settings.

RA settings, beam spot parameter (fraction in 20x20 mm² with TOF cut), L3=9.75kV (t0 =3351):

Run	Field (A/G)	RA-L	RA-T	RA-R	RA-B	in 20x20 mm ²	x0 (mm)	y0 (mm)
1421	17.4/100	0.25	0.40	0.25	0	0.487	+0.12	-0.35
1420	88.0/500	0.25	0.40	0.25	0	0.560	+0.35	-0.05
1419	132/750	0.25	0.40	0.25	0	0.670	-0.02	-0.20
1418	175/1000	0.25	0.40	0.25	0	0.780	-0.99	-0.46
1417	219/1250	0	0	0	0	0.824	-0.68	+0.27
1416	263/1500	0.30	0	0	0.30	0.975	-0.09	+0.22
1415	307/1750	0.30	0	0	0.30	0.949	-0.66	+1.02
1414	350/2000	0.80	0	0	0.80	0.769	-0.60	-0.08
1413	438/2500	0.80	0	0	0.80	0.502	+0.20	-1.01

Compare with 10.0 G runs on MCP2, RA on, different transport settings:

(**note:** the beam fractions in 20x20 mm² (with TOF cut) are a bit smaller compared to previous measurements because now a finer binning is used; the fractions from previous runs with coarser binning were for an area slightly larger than 20x20 mm²)

Run	Field (A/G)	RA-L	RA-T	RA-R	RA-B	in 20x20 mm ²	x0 (mm)	y0 (mm)	Asymmetry
1348	17.4/100	4.99	4.99	4.99	4.99	0.848	-0.67	-0.32	0.094(2)
1349	17.4/100	6.82	6.82	6.82	6.82	0.877	-0.33	+0.06	0.106(2)
1350	17.4/100	8.26	8.26	8.26	8.26	0.891	-0.16	+0.39	0.104(1)
1351	17.4/100	10.56	10.56	10.56	10.56	0.902	+0.01	+0.53	0.118(2)

Thu Aug 7 12:05 2008:

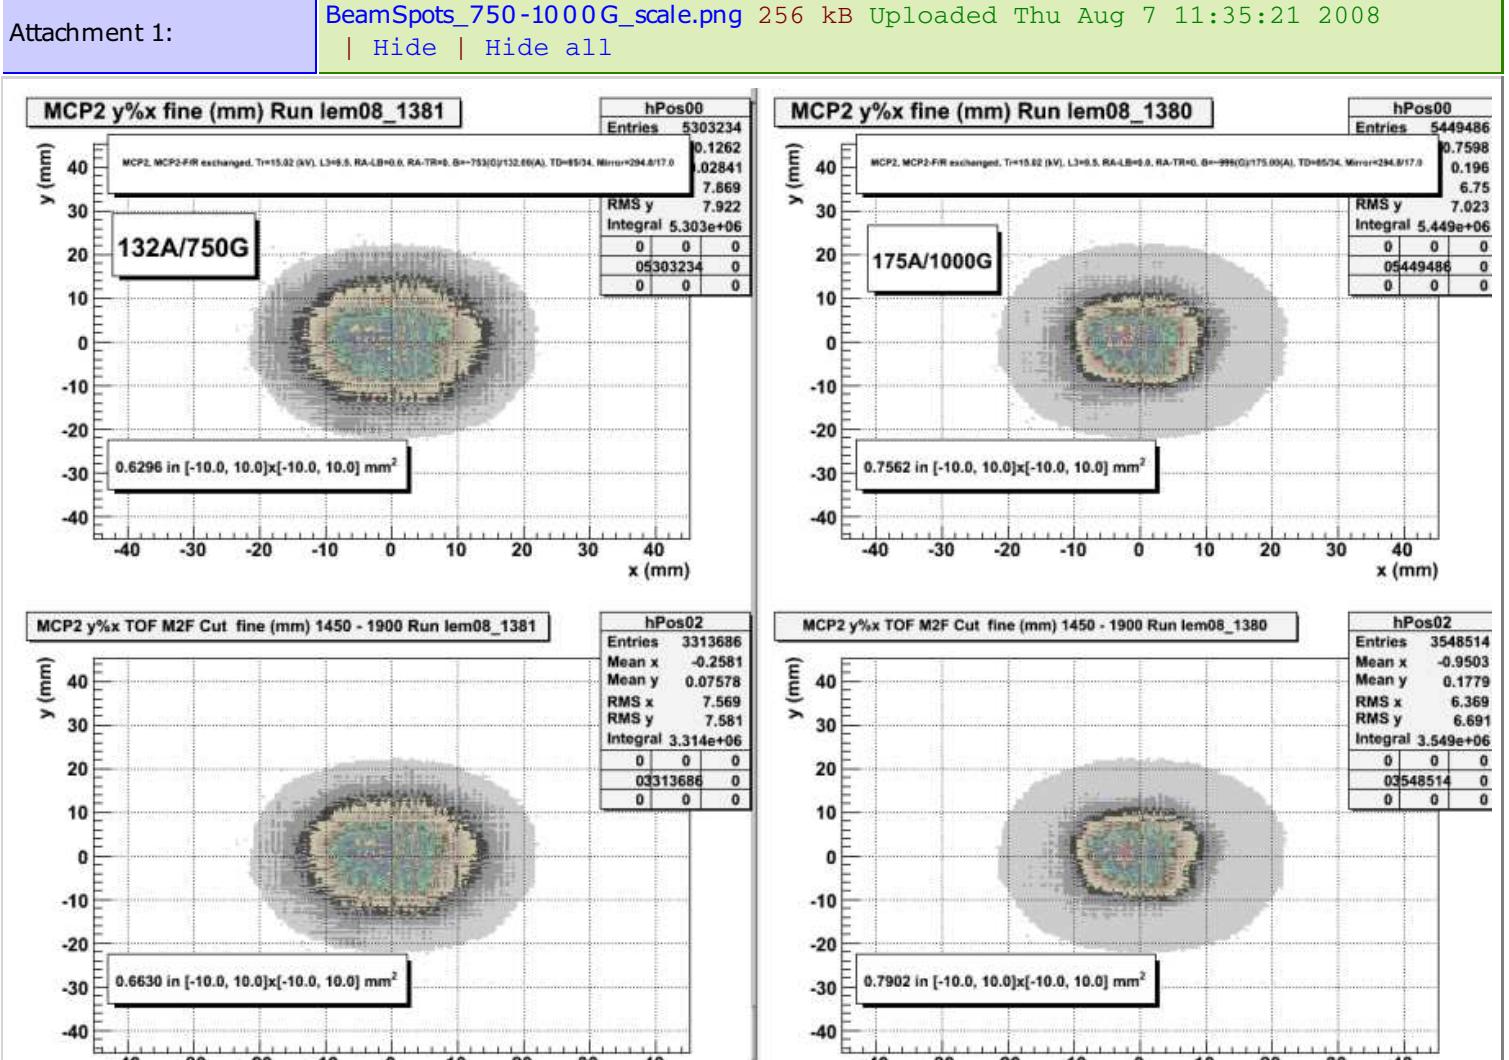

still no beam due to leak check in "Dom". Test of moderator after refilling LHe:

unstable MCP1 rate at 15kV, getting more unstable at 16kV.

Decide to grow new moderator...

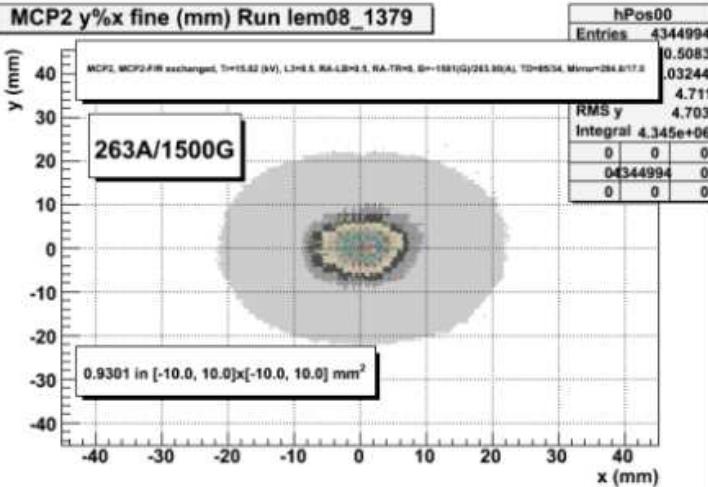

Thu Aug 7 13:52 2008:

still vacuum leak in "Dom". Moderator is at 150 K. Do HV test at 150 K.
