Agilent 33220A
Function/Arbitrary Waveform Generator
Quick Reference Guide

- Square brackets (**[ ]**) indicate optional keywords or parameters.
- Braces (**{ }**) enclose parameters within a command. Default parameters are shown in **bold**.
- Triangle brackets (**< >**) enclose parameters for which you must substitute a value.
- A vertical bar (|) separates multiple choices.

The APPLy Commands

(*see page 163 in User's Guide*)

```
APPLy
  :SINusoid [<frequency> [,<amplitude> [,<offset>] ]]
  :SQUare [<frequency> [,<amplitude> [,<offset>] ]]
  :RAMP [<frequency> [,<amplitude> [,<offset>] ]]
  :PULSe [<frequency> [,<amplitude> [,<offset>] ]]
  :NOISe [<frequency|DEF>[1] [,<amplitude> [,<offset>] ]]
  :DC [<frequency|DEF>[1] [,<amplitude>|DEF>[1] [,<offset>] ]]
  :USER [<frequency> [,<amplitude> [,<offset>] ]]

APPLy?
```

[1] *This parameter has no effect for this command but you MUST specify a value or "DEFault".*

State Storage Commands

(*see page 238 in User's Guide*)

```
*SAV {0|1|2|3|4}
*RCL {0|1|2|3|4}

Using the APPLy Command

The APPLy command provides the most straightforward method to program the function generator over the remote interface. For example, the following command string sent from your computer will output a 3 Vpp sine wave at 5 kHz with a -2.5 volt offset.

```
APPL:SIN 5.0E+3, 3.0, -2.5
```

Using the Low-Level Commands

Although the APPLy command provides the most straightforward method to program the function generator, the low-level commands give you more flexibility to change individual parameters. For example, the following command strings sent from your computer will output a 3 Vpp sine wave at 5 kHz with a -2.5 volt offset.

```
FUNC SIN
FREQ 5000
VOLT 3.0
VOLT:OFFS -2.5
```

Reading a Query Response

Only the query commands (commands that end with "**?**") will instruct the function generator to send a response message. Queries return internal instrument settings. For example, the following command string sent from your computer will read the function generator's error queue and retrieve the response from the most recent error.

```
SYST:ERR?
enter statement
```

Selecting a Trigger Source

When *Sweep* or *Burst* is enabled, the function generator will accept an immediate internal trigger, a hardware trigger from the rear-panel *Trig In* connector, a manual trigger from the (Trigger) key, or a software (bus) trigger. By default, the internal trigger source is selected. If you want to use an external or a software trigger source, you must first select that source. For example, the following command strings sent from your computer will output a 3-cycle burst each time the rear-panel *Trig In* connector receives the rising edge of a TTL pulse.

```
BURS:NCYC 3
TRIG:SLOP POS
TRIG:SOUR EXT
BURS:STAT ON
```
